

Adaptive, Identity-Centric Security for Hybrid IT

AppGate SDP secures the network with a Software-Defined Perimeter – a network security model that dynamically creates one-to-one network connections between the user and the resources they access. Everything else is invisible including the system itself.

**APPGATE SDP OFFERS
 SECURE, CONTEXT-AWARE
 NETWORK ACCESS**

Grants access based on context-sensitive identity

Secure, encrypted connection between user and approved system

Eliminates lateral movement on internal networks

Unauthorized resources are completely invisible

Built like cloud – massively scalable, distributed & resilient
