

CYXTERA FEDERAL GROUP

With cyberattacks on the rise in frequency and severity, it is more important now than ever that government organizations effectively secure systems, networks and data. Cyxtera Federal Group's (CFG) mission is to support agencies across the federal government with a portfolio of secure infrastructure solutions delivered from a global footprint of world-class data centers, including six in the Washington, D.C. metropolitan area where the division is based.

CYBERSECURITY BUILT FOR TODAY'S IT

Massively scalable, hybrid ready, cloud native and cloud agnostic

Software-defined perimeter solutions for dynamic and adaptive network access

Advanced investigative and network analytics to detect, predict and prevent threats

A GLOBAL LEADER IN COLOCATION

57 World-class data centers in 25+ global markets

50+ Data centers with Uptime Institute M&O Stamp of Approval

2.6M sf of data center space.

195MW of power

100% Availability SLAs

600+ Certified engineers & operations personnel

THE SECURE INFRASTRUCTURE COMPANY

The last two decades have seen seismic changes in the availability, agility and scalability of IT. The next era in technology must be underpinned by a revolution in infrastructure security. That's why we built Cyxtera—a secure infrastructure platform for today's agile, distributed enterprise and federal IT infrastructures.

Cyxtera Federal Group brings together a global data center footprint and a modern, hybrid- and cloud-ready security portfolio for federal agencies. The result is a powerful, resilient platform capable of securing and supporting dedicated infrastructure, private and public clouds—and with software and services that extend protection to on-premises environments and public clouds.

A PLATFORM FOR THE NEXT ERA

Today's federal IT infrastructures run in more locations, on more platforms, and with more diverse models than ever before. IT is dynamic, distributed, mobile and deeply interconnected. And our systems operate in real-time, with software-defined agility and global scale. But the ways in which we secure infrastructure and networks haven't changed. They remain hardware-centric and inflexible in an API-driven universe.

They're perimeter-focused in a world without boundaries. It's the same cumbersome, expensive, static hardware trying in vain to secure a world in constant motion.

By combining a modern, hybrid-ready information security fabric with an uncommonly diverse and distributed footprint of 57 world-class data centers, Cyxtera Federal Group delivers a secure platform for connecting and protecting hybrid infrastructure in our data centers, on-premises at agencies, and on government clouds, private clouds and public clouds.
