

# Cyxtera Platform Government Edition

Purpose Built for Government Customers

Cyxtera Platform Government Edition is an on-demand infrastructure and interconnection platform that provides the security and control of colocation environments with cloud-like elasticity and scalability.

Cyxtera is one of the largest independent and global data center platforms in the world, providing government agencies with on-demand infrastructure and interconnections to augment or replace agency-owned data center resources, including the necessary security and control features to meet all requirements for the FedRAMP High Impact Level.

## Cloud Smart, FedRAMP Ready, Enterprise-Grade

- Purpose-built on-demand infrastructure and interconnection platform that provides the security and control of colocation environments with cloud-like elasticity and scalability.
- Seamless integration between digital infrastructure and existing colocation environments.
- Available in Northern Virginia and Dallas markets, but easily extendable to other sites.
- Full FedRAMP boundary encapsulation of our digital exchange infrastructure and software.
- Designated and separated government network core and Enterprise Bare Metal compute.

# Future-Ready, Government Platform

- Quickly spin up operations across our expansive footprint.
- Ensure consistent, industry-leading reliability, security and performance in all locations thanks to our global data center standards.
- Monitor and manage your digital infrastructure and data center environments in a single-pane view through the Cyxtera Portal.
- Meet the needs of cloud smart initiatives with our FedRAMP Ready digital infrastructure.
- Access rapid interconnection through our robust ecosystem of 2,300 enterprises, cloud and network service providers

## Benefits for Government Agencies

Deploy FedRAMP compliant private clouds with our Enterprise Bare Metal for Government.

Accelerate adoption of “Cloud Smart” mandates and improve FITARA ratings.

Fast-track digital transformation and hybrid IT initiatives.

Manage provisioning and monitoring remotely via The Cyxtera Portal.

Conform security and compliance controls to existing processes and frameworks with dedicated hardware.  
Retain exclusive ownership over all your data.

Streamline Disaster Recovery (DR) and Continuity of Operations (COOP) planning.

Reduce capital expenditures with simplified subscription pricing and built-in cost control features.

# How to get started with **Cyxtera** Platform Government Edition

Choose from a catalog of pre-configured servers, racked and cabled in Cyxtera-managed environments, and directly connected to our secure and compliant digital exchange fabric. Then choose the architecture, hypervisor, and/or OS that best fits your needs.

Easily provision the servers and infrastructure you've selected through our web-based portal or API, and gain ultimate control via the Cyxtera Portal in order to monitor and manage your infrastructure remotely.

Once provisioned, each server is a separate isolated unit dedicated to only you and your agency.

Ready to get started with  
**Cyxtera Platform Government  
Edition?**

Reach us at **1-855-699-8372** or  
[Sales@Cyxtera.com](mailto:Sales@Cyxtera.com)

With native IPMI-level access to your servers and full FedRAMP boundary encapsulation of both platform infrastructure and software, you are ensured complete control of the entire stack from the motherboard and up.

With Cyxtera Platform Government Edition, your new servers function seamlessly as part of any existing colocation environment. Thanks to Layer 2 network integration via a fiber port to the digital exchange fabric, your infrastructure will operate as a single, integrated whole.
