

Simplify and accelerate data center modernization

As enterprises strive to meet the demands of today's accelerating market, they may find that their legacy IT infrastructure holds them back, creating performance, security, and compatibility issues that impact the pace of business. Yet, even with the myriad challenges associated with obsolete technology, the choice to modernize is not always an easy one; technology refreshes can be complex, risk-prone, and capital-intensive undertakings.

Fortunately, Cyxtera can dramatically simplify the IT modernization process. By providing on-demand infrastructure over our automated, intelligent platform, Cyxtera cuts out the operational complexity, risk factors, and capital expenditures that have historically been associated with IT infrastructure updates. This enables enterprises to improve control and reliability, accelerate their time-to-solution, and reduce hardware costs.

Why partner with Cyxtera on your technology refresh?

→ **Easy, rapid modernization**

Rapidly provision compute, storage, and networking — no need to procure hardware, stage duplicate environments, or orchestrate complex migrations.

→ **Right-size deployments effortlessly**

With the ability to spin up services on demand, you no longer risk overprovisioning space, power, or bandwidth.

→ **Futureproof IT**

Skip the burden of lengthy refresh cycles with immediate access to best-in-class servers, available as-a-service.

→ **Flexible, cost-effective billing**

Avoid rigid contracts and costly capital investments with our predictable, monthly pricing model.

→ **Faster time to market**

Deploy your IT infrastructure in minutes, not months, with on-demand provisioning and connectivity.

→ **Maximum visibility and control**

Manage and monitor your complete environment via our powerful, fully automated platform.

The Cyxtera platform enables enterprises to provision and configure the capacity they need, when they need it. With a best-in-class management portal and complete portfolio of as-a-Service offerings at their fingertips, IT teams can rapidly solve for IT modernization with:

Enterprise Bare Metal

Enterprise Bare Metal (EBM) enables enterprises to provision dedicated, best-in-class bare metal servers from providers like Nutanix, Fujitsu and HPE. EBM empowers teams to modernize their infrastructure by giving them the power, performance, and control of dedicated hardware with the simplicity and scale of on-demand provisioning.

Effortless Connectivity

The Digital Exchange is a resilient, programmable network fabric that enables teams to configure and optimize their networks at the speed of software. Facilitate secure data migration, seamlessly extend your environment, and connect directly to Cyxtera's rich ecosystem of network, cloud, and service providers, all via API or web portal — no routing equipment or physical cabling required.

Enterprise Storage-as-a-Service (STaaS)

Cyxtera's on-demand storage offering — powered by enterprise STaaS provider Zadara — provides convenient, flexible storage with a pay-as-you-go, fully-managed cloud model. With rapid deployment and support for any protocol, Enterprise STaaS is a highly secure and scalable solution that makes it easy to modernize and expand storage-intensive environments.

Smarter Remote Management

The Cyxtera Portal gives enterprises a unified interface to provision, monitor, and control their complete data center environment from anywhere. From monitoring colocation to deploying digital services, the portal's expansive functionality and intuitive user experience simplify operations while maximizing control, enabling teams to modernize their environments with visibility, speed, and precision.

Cyxtera Features

- Global footprint, 60+ Hybrid Ready data centers in 29 markets
- Access to a digital ecosystem of 600+ global network providers, 182+ cloud on-ramps, and a broad range of service providers.
- >99.9999% uptime SLA and at least N+1 power backup.
- Software-powered, self-service portal for on-demand provisioning
- Enterprise-grade Bare Metal and XaaS portfolio that enables the data center on-demand
- Robust interconnection services with rapid, low-latency, direct connections
- Future-ready, intelligently automated platform built from the ground up
