

# Business Agility, Delivered

Future-ready, dedicated infrastructure for enterprises that demand agility and scale.

## Future-Ready and Designed for Scale

As the world's most future-ready, extensible data center platform, Cyxtera was designed to help businesses gain the agility and flexibility they need to meet digital transformation objectives and sharpen their competitive edge.

By giving our customers the power to provision all of the infrastructure and services they need on-demand, Cyxtera enables enterprises to benefit from the scale and speed of the cloud while retaining the control, security, and reliability of dedicated infrastructure.

## Benefits

### Access Services On-Demand

Power your digital transformation with instant access to bare metal servers, enterprise storage, networking, and AI/ML compute as-a-service.

### Manage Costs

Cyxtera's flexible pricing model allows you to avoid rigid fixed contracts and capital-intensive hardware purchases.

### Boost Enterprise Agility

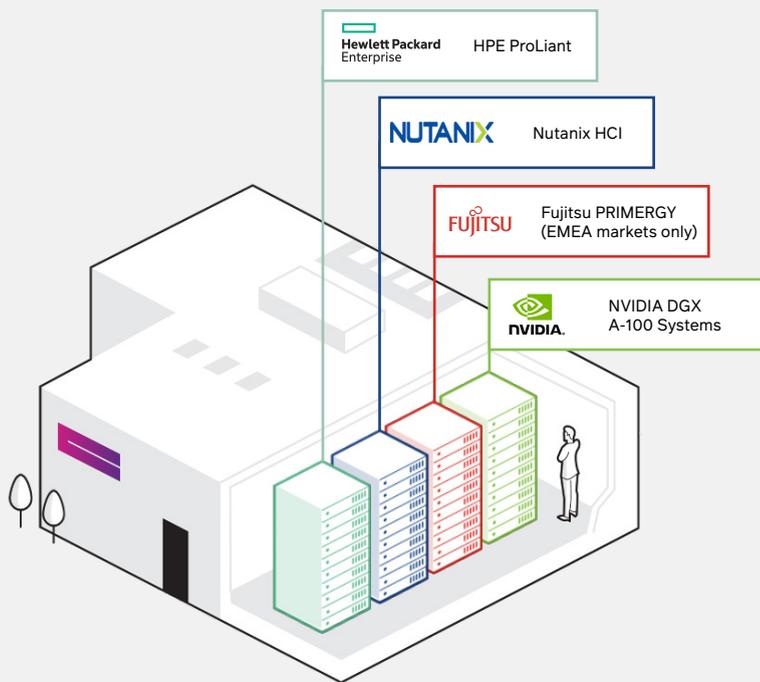

Intelligent automation enables instant provisioning, robust remote monitoring and control, and rapid interconnection.

### Security and Reliability

Take advantage of the powerful speed and scale the cloud offers without compromising on security, reliability, or performance.

### Faster Time-to-Market

Power your digital transformation with instant access to bare metal servers, enterprise storage, networking, and AI/ML compute as-a-service.

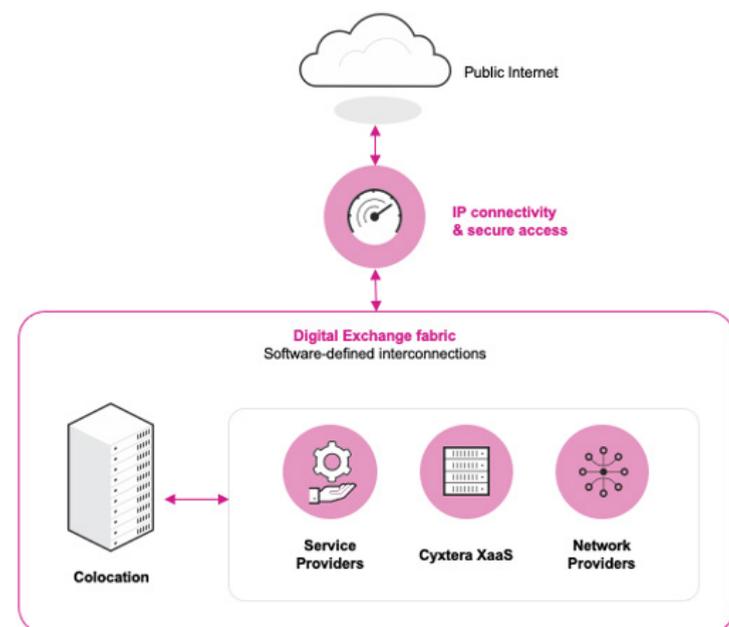

## Enterprise Bare Metal

Looking to spin up a new data center quickly – without compromising on performance, cost, or control?

Choose one of Cyxtera’s Enterprise Bare Metal solutions to instantly provision a dedicated server customized to meet the needs of your organization. Our partnerships with top-tier providers, including Nutanix, Fujitsu and HPE, enable us to provide your enterprise with secure, high-performance power and connectivity.

Our customers tell us our on-demand infrastructure solutions offer the best of all worlds, including:

- Rapid access to compute power for even the most bandwidth-intensive compute workloads.
- The ability to increase capacity as needed to meet business requirements.
- The world-class performance, reliability, and cost-effectiveness associated with traditional colocation solutions.
- A predictable monthly operational expense instead of a large, upfront capital expenditure.

## Network-as-a-Service (NaaS)

Cyxtera’s Network as a Service (NaaS) solution gives enterprises upstream and intra-data center connectivity on demand. Delivered through IP Connect and our dedicated Digital Exchange fabric, NaaS unlocks resilient, programmable direct connections without cabling or routing equipment.

Rapidly deploy reliable IP bandwidth, get secure access from anywhere, and extend your data center environment with the simplicity and agility of software.

## Benefits

### Achieve faster time to market

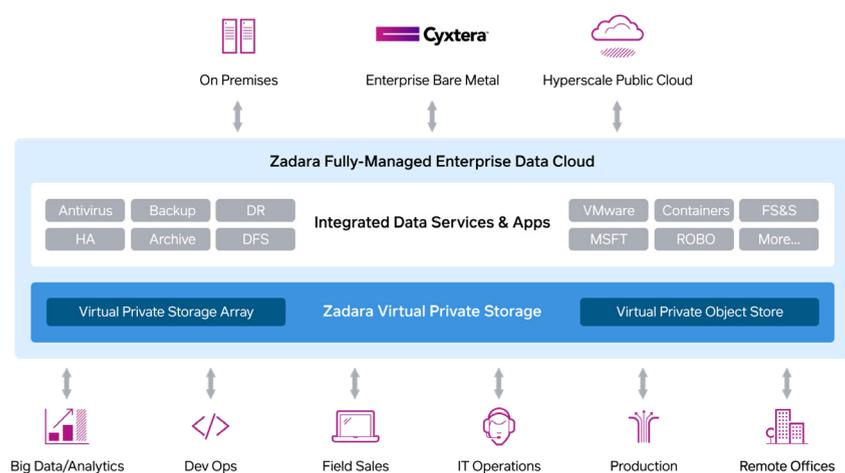

Get connected in minutes, not months, with automated provisioning. Order and configure any connection via API or portal.

### Software-defined simplicity

Connect your infrastructure using only software – there is no routing equipment or physical cabling required.

### Unify and scale your solution

Seamlessly connect everything to a unified environment from anywhere, from colocation to service providers and digital infrastructure.

## Enterprise Storage-as-a-Service (STaaS)

Cyxtera's new on-demand storage offering — powered by enterprise STaaS provider Zadara — provides convenient, flexible, and enterprise-class storage with a pay-as-you-go, fully-managed cloud model. Enterprise STaaS is a highly secure and scalable solution that puts your enterprise fully in control of its digital assets.

### Benefits

#### Operational Agility

Trade in long lead times for an on-demand services model that allows you to easily expand your storage space as market demand increases.

#### Financial Flexibility

Shift from making large capital expenditures to a subscription-based pricing model, and free up valuable CapEx funds to reinvest in and grow your business.

#### Enable New Business Models

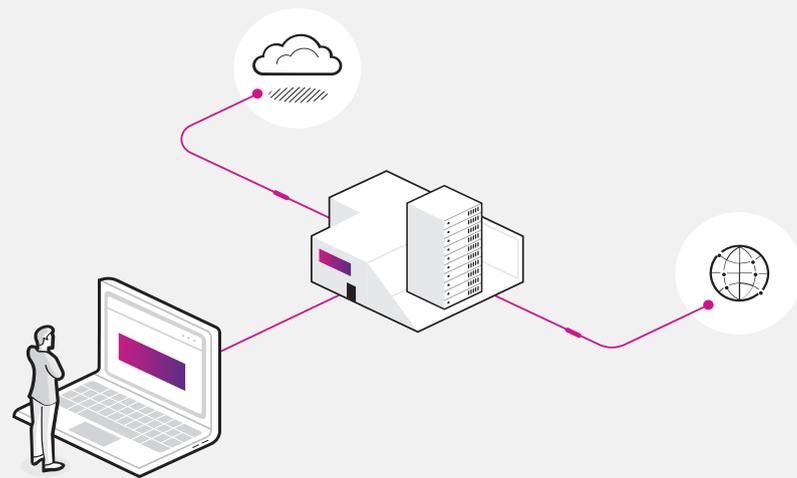

Provision storage faster to power new products and applications.

#### Cloud-Agile Enterprise Storage

Combines the functionality of enterprise storage with the convenience and agility of the cloud. Any data type, any protocol, any location.

**Experience the data center on-demand now.**

## AI/ML Compute-as-a-Service

Cyxtera's AI/ML Compute as a Service, powered by NVIDIA DGX A100 systems, is provided directly within our data centers. Delivering the best features of cloud and on-premises offerings, Cyxtera and NVIDIA have collaborated to provide businesses with the opportunity to build the nimble architecture that AI workloads require.

### Benefits

#### Exceptional performance at massive scale

Massive GPU-accelerated compute combined with state-of-the-art networking hardware and software optimizations enables bandwidth-intensive initiatives, such as conversational AI and large-scale image classification.

#### Faster Time-to-Solution

Consolidate training, inference, and analytics into a single unified AI infrastructure that can be deployed in a single business day, speeding up the time-to-solution for new AI/ML workloads.

#### Predictable Costs and Accelerated ROI

No longer rely on testing economies of scale in the cloud as you ramp your AI/ML programs. Manage budgets and upfront cost by shifting from a CapEx to a predictable OpEx model you control.

#### Maximum Control

Retain full control from hardware up through applications. Provisioning via Cyxtera offers the security and control provided by your own dedicated infrastructure, combined with a cloud-like buying experience.
