

Cyxtera Platform Government Edition

Cyxtera Platform Government Edition is an on-demand infrastructure and interconnection platform that provides the security and control of colocation environments with cloud-like elasticity and scalability.

Cyxtera is one of the largest independent and global data center platforms in the world, providing government agencies with on-demand infrastructure and interconnections to augment or replace agency-owned data center resources, including the necessary security and control features that meet FISMA requirements.

Cloud Smart, Enterprise-Grade

- Purpose-built on-demand infrastructure and interconnection platform that provides the security and control of colocation environments with cloud-like elasticity and scalability.
- Seamless integration between digital infrastructure and existing colocation environments.
- Available in Northern Virginia and Dallas markets, but easily extendable to other sites.
- Designated and separated government network core and Enterprise Bare Metal compute.

Future-Ready, Government Platform

- Quickly spin up operations across our expansive footprint.
- Ensure consistent, industry-leading reliability, security and performance in all locations thanks to our global data center standards.
- Monitor and manage your digital infrastructure and data center environments in a single pane view through the Cyxtera Command Center.
- Access rapid interconnection through our robust ecosystem of 2,300 enterprises, cloud and network service providers

Benefits for Government Agencies

- Accelerate adoption of “Cloud Smart” mandates and improve FITARA ratings
- Fast-track digital transformation and hybrid IT initiatives
- Manage provisioning and monitoring remotely via The Cyxtera Command Center
- Conform security and compliance controls to existing processes and frameworks with dedicated hardware
- Retain exclusive ownership over all your data. Streamline Disaster Recovery (DR) and Continuity of Operations (COOP) planning
- Reduce capital expenditures with simplified subscription pricing and built-in cost control features

How to get started with Cyxtera Platform Government Edition

Choose from a catalog of pre-configured servers, racked and cabled in Cyxtera-managed environments, and directly connected to our secure Digital Exchange fabric. Then choose the architecture, hypervisor, and/or OS that best fits your needs.

Easily provision the servers and infrastructure you've selected through our web-based interface or API, and gain ultimate control in order to monitor and manage your infrastructure remotely. Once provisioned, each server is a separate isolated unit dedicated to only you and your agency.

With native IPMI-level access to your servers, you are ensured complete control of the entire stack from the motherboard and up. With Cyxtera Platform Government Edition, your new servers function seamlessly as part of any existing colocation environment, thanks to Layer 2 network integration via fiber port to our Digital Exchange fabric, your infrastructure will operate as a single, integrated whole.
