

DetectID Enterprise

Unified, multi-factor authentication

Strong authentication is critical for protecting sensitive resources against threats. With workforces growing ever more remote and mobile, enterprises must set up defenses that cover all applications, networks, and users.

As an additional layer to providing secure access to protected resources, multi-factor authentication supports the Zero Trust framework by seamlessly verifying identity prior to granting entry.

DetectID Enterprise is an out-of-the-box, multi-factor authentication solution that enables secure, unified access to your company's most sensitive resources using a single, integrated system. The highly customizable solution allows organizations to tailor their authentication to meet their specific security needs.

BENEFITS

Complete user coverage to protect every employee and access point

Seamless integration with all enterprise applications

A variety of advanced authentication factors to choose from

An identity-centric foundation for establishing Zero Trust

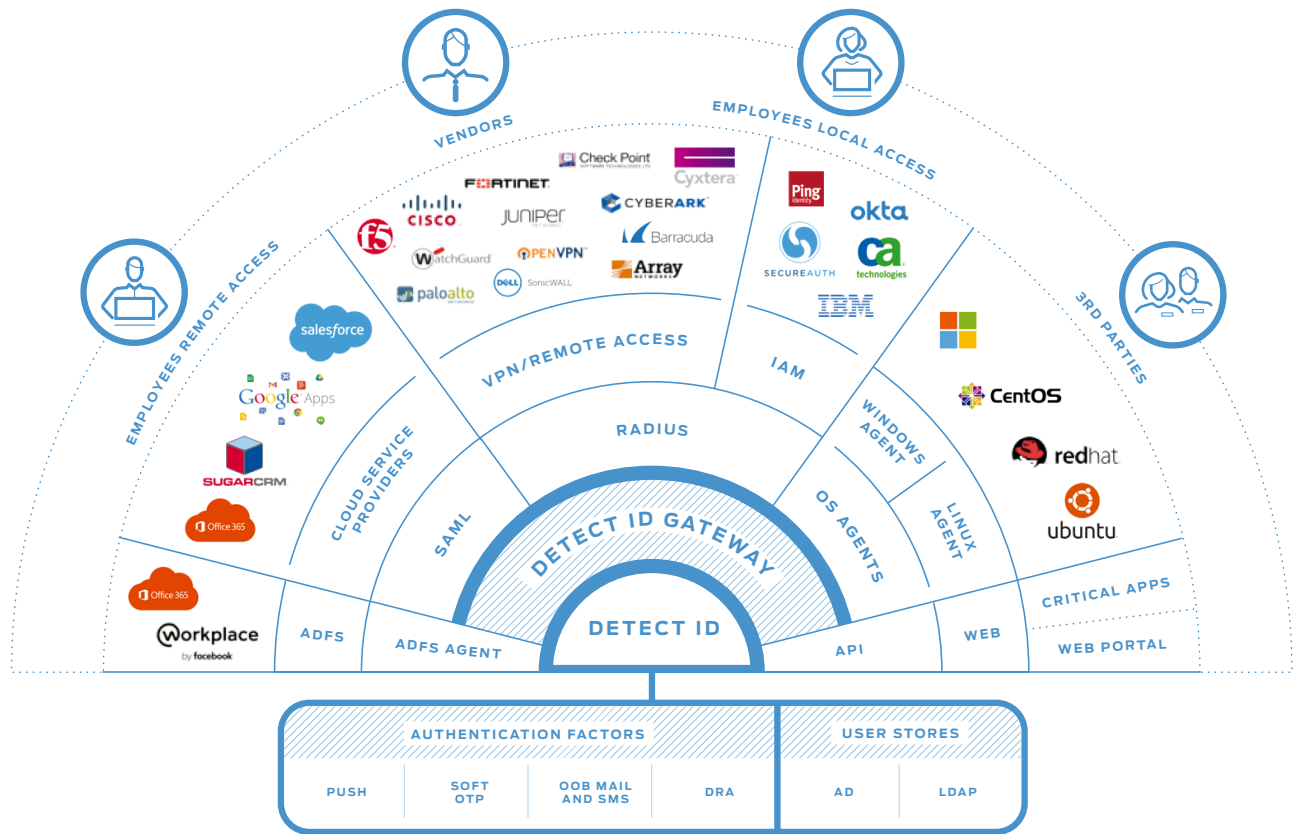

Low-friction mobile authentication

Easy user enrollment and adoption

“ZERO TRUST FOR DATA, NETWORK, AND IDENTITIES IS IMPOSSIBLE WITHOUT STRONG ACCESS CONTROL.”

-FORRESTER

DetectID Enterprise leverages a full suite of features to unify access across your entire organization.

WIDE SELECTION OF STRONG AUTHENTICATION FACTORS

Choose from a broad range of modern authentication factors, such as push authentication, device recognition, and software-delivered one-time passwords. Legacy solutions, including hardware tokens, provide an alternative to mobile authentication.

SEAMLESS INTEGRATION WITH ENTERPRISE ECOSYSTEMS

Integrate with more than 5000 applications, security vendors, and cloud providers.

FLEXIBLE DEPLOYMENT OPTIONS

DetectID Enterprise allows organizations to choose between a cloud-hosted solution or an on-site deployment, depending on their specific needs.

CONVENIENT SCALABILITY

Easily deploy strong authentication for any size user population with a solution that already secures millions of users.

LOWER FRICTION BY GOING MOBILE

Empower organizations to strengthen security and user experience by leveraging mobile devices as authentication keys.
