

# Cyxtera Cloud Connect

## Connecting colocation to the cloud and between cities

Enterprises have adopted hybrid IT strategies to benefit from the public cloud while still hosting sensitive or business-critical systems either on-premises or in colocation centers. But adding connections to public cloud providers or extending connections between colocation centers involves working with multiple third parties, which adds complexity and delay.

With Cyxtera Cloud Connect, businesses can quickly and easily create direct, secure connections to leading public clouds or between Cyxtera colocation centers. This allows the ability to eliminate delays and resolve complexities of public cloud connections using a simple, one-stop approach to provisioning and access.

*Directly connect, access, and extend your environment to the Cloud—no third parties needed*

## Benefits

### Achieve faster time-to-market

With Cyxtera Cloud Connect, you're connected in minutes, not days, with automated provisioning. You can order and configure cloud connections on-demand from Cyxtera via our API or through our Portal, allowing your business to make changes as business needs shift quickly.

### Slash "hidden" cloud costs

Save up to 7X on cloud egress costs by establishing direct connection to leading cloud service providers for your data access, including AWS, Microsoft Azure, Google Cloud Platform, or Oracle Cloud Infrastructure.

### Create seamless global infrastructure networks

Experience seamless access to cloud on-ramps, multiple clouds, and point-to-point connections between Cyxtera metro colocation environments.

### Reduce Complexity

Control all your connectivity via a single pane view offered by Cyxtera's highly intuitive user portal.

## Capabilities

### Seamless access to public cloud providers

Establish high-speed, low-latency, and secure, reliable connections to public clouds outside of Cyxtera-operated data centers in near real-time.

### Connect to Cyxtera colocation environments in different metropolitan areas

Use point-to-point connections between your colocation environments in different Cyxtera metropolitan areas—whether across the country or the world.

### One-stop-shop for ordering and managing

Order and manage connections to public cloud providers or between Cyxtera colocation environments directly from Cyxtera—all through the Cyxtera Portal or our API.
